Continuation of 5. does NOT place the application in condition for allowance because: Regarding newly added limitations to claim 16, th prior art of Oka et al. includes such limitation because Oka shows that the high refractive index layer has a refractive index which is higher than that of the hardcoat layer which has a refractive index of at least 1.63 (column 27, line 31 to column 29, lines 36). Oka shows that the refractive index of the low refractive index layer (surface layer) is about 1.35-1.45 (column 29, line 41 to column 30, line 35) and comprises inorganic particles with low refractive indices and hardness such as a fluorocarbon polymer (column 54, lines 1-17). Additionally, in amended claim 16, the terms "is formed... is coated on... enters into the pores of said precursory layer, and then said liquid material is hardened" introduces process limitations to the respective product claims. The patentability of a product does not depend on its method of production. If the product in the product by process claim is the same as or obvious from a product of the prior art, the claim are unpatentable even though the prior art was made by a different process.
